

OVERWATCH

AI-POWERED OPERATIONAL INTELLIGENCE

MARCH 2026
UNCLASSIFIED

THE PROBLEM

Commanders receive operational data as unstructured narratives — OPLANs, FRAGORDs, intel reports. Staff must manually extract and cross-reference before it informs decisions. This takes hours to days and cannot keep pace with operations.

WHAT OVERWATCH DELIVERS

An AI system that reads operational documents and automatically produces structured, actionable output — units on a map, missions on a timeline, dependencies in a knowledge graph. Minutes, not hours.

THREE LINES OF EFFORT

LOE 1

Find & Define Data

- Discover what commands produce today
- Define what Overwatch needs — requirements back to commands
- Bridge gaps with S3/S5 exercise data and Maven holdings

Active — pursuing CENTCOM/INDOPACOM POCs, characterizing S3/S5 data

LOE 2

Build AI POC

- Air-gapped, unclassified prototype using AI-generated scenario data
- POC 1: ingest → structure → knowledge graph → map/Gantt
- POC 2: gap detection, priority tracing, impact analysis

POC 1 ~85% complete — targeting mid-May demo

LOE 3

Maven Integration

- Re-engineering LOE 2 capabilities in the accredited environment
- AI doc generation and real doc parsing underway
- Ontology shaping as real data formats emerge

Building in parallel — not waiting for LOE 2

HOW OVERWATCH WORKS

POC 1 — NARRATIVE TO STRUCTURE

POC 2 — DECISION SUPPORT

KEY MILESTONES

APR 15

Leadership findings report: data landscape, LIMFACs, access needs

MAY 15

POC 1 demo: document → knowledge graph → map/Gantt

JUN 1

Maven MVP ready for exercise use

SEP 30

Deployment / continued development decision
